

**TROCAL®**  
Always good for new ideas.

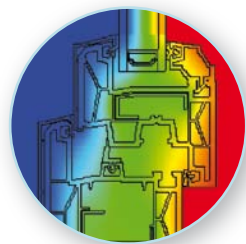

The uplifting idea:  
TROCAL AluClip.

# Simple like all good ideas.

## » TROCAL AluClip.

The TROCAL AluClip concept is a fusion of two designs – the established aluminium cladding system and an intelligent combination of PVC and aluminium. TROCAL AluClip lets you realise your own colour ideas, whatever they may be. We not only provide a range of standardised RAL colours in matt, high-gloss, anodised, and NCS designs, we can also cater for an unlimited number of special colour needs. And not only that – colour combinations, styles, and particular patterns can be designed specifically to meet with your own requirements.

### Economical.

The combination PVC and aluminium exhibits superior thermal insulation values.

### Colours.

The range of colours for our aluminium cladding includes 2,000 colour variants in addition to the approx. 200 RAL hues available on the market.

### Design.

TROCAL AluClip is the perfect complement to all facade designs. For example, combined with an aluminium facade structure it gives rise to a completely homogeneous exterior look.

## » Intelligent like all well thought-out ideas.

The combination PVC and aluminium is an exemplary fusion of the PVC window's perfect exterior look and its thermal insulation values.

At the same time, the PVC profile system TROCAL InnoNova\_70.M5 presents the best insulation properties that not only easily meet the new legal provisions under the EnEV (Energy Savings Act), but even surpass them. TROCAL AluClip allows you to realise a completely homogeneous exterior look; on the inside the easy-care and low-maintenance PVC profile retains its positive properties. In addition, TROCAL InnoNova\_70.M5 is 100% recyclable.

## The fastest way to an individual image.

TROCAL AluClip – What this means for you is a basic idea and many new possibilities for unlimited colour designs to give your company an individual face. For instance, let's say that at some time in the future the famous three-striped motif from the world

of sports is to be integrated in the design of the said company's windows. TROCAL AluClip can not only provide the solution, it can also contribute decisively towards the implementation of the company's corporate identity.
