

greenline –
takes the lead out of PVC-U windows

greenline heralds a new era in window manufacture.

» Welcome to the future.

As a lead free stabiliser in the recipe for high quality window PVC-U greenline fulfils today the special environmental requirements of tomorrow.

Since 2004 the profine Group has been employing greenline, a chemical stabiliser based on calcium and zinc, in the raw materials for its PVC-U window profiles and so avoids lead in the manufacturing process.

Opt now for this modern generation of PVC-U windows, and choose in favour of greater sustainability. A highly important stabiliser for high quality PVC-U profiles, greenline comes as standard and without extra charge on windows and doors for all PVC-U profile systems of the TROCAL brand.
